## TechTix: Interactive Event Booking Product

TECHTALK
Dela Cruz, Eunice
De Silva, Irene
Castro, Stacey
Guce, Angelyn

# Project Overview

TechTix is a responsive website and mobile-friendly experience for booking tickets to concerts, festivals, plays and sports events.

It supports discovery, ticket selection, checkout, confirmation and later ticket access.

*Personas and requirements are illustrative assumptions, to be validated with real users.*

# Research Approach

1. Interview friends or family about ticket buying
2. Observe users on existing ticket sites
3. Review booking sites for common steps and issues
4. Record goals, problems and device needs
5. Validate and revise the requirements

# Initial User Requirements

1. Find events by keyword, category, date or venue
2. See details, ticket types, fees, availability
3. Choose ticket quantity or seats
4. Know the total cost before paying
5. Use a secure, understandable checkout
6. Get clear success, failure or pending feedback
7. Receive a booking reference and confirmation
8. Access digital tickets and bookings later
9. See clear errors and next steps if sold out
10. Use mobile and desktop easily

# Mika Santos

Budget-conscious student, 20, mainly on her phone

## Goals

Find affordable concert tickets; book for herself and a friend

## Pain Points

Surprise fees, tickets selling out, long phone forms

## Needs

Fast mobile search, clear pricing, short checkout

# ALEX RIVERA

Busy event organizer, 32, desktop and mobile

## Goals

Coordinate a group outing; keep bookings organized

## Pain Points

Unclear seat maps, scattered info, payment-error doubt

## Needs

Clear event info, reliable checkout, easy ticket access

# Main Scenarios

## Mika books a concert

1. Search concert by artist and date
2. Review details, tiers and prices
3. Compare totals including fees
4. Check the order summary
5. Pay through secure checkout
6. Get reference and digital tickets

***Success:*** *sees full price before paying; retrieves tickets easily.*

## Alex plans a group outing

1. Filter by date, location, category
2. Review schedule, restrictions, prices
3. Pick quantity or seats
4. Enter details and check out
5. Share booking reference with friends
6. See clear status if payment fails

***Success:*** *reliable booking and accurate ticket details.*

# Product Drivers

**Convenience**

Discovery, comparison, purchase and tickets in one place

**Trust and transparency**

Clear prices, fees, availability and status

**Mobile access**

Works on smartphones and desktop

**Choice**

Compare events, dates, tiers and seating

**Reliability**

Fewer sold-out, payment and confirmation surprises

**Business value**

A digital sales channel for organizers

# Project Constrants

### Convenience

Discovery, comparison, purchase and tickets in one place

### Trust and transparency

Clear prices, fees, availability and status

### Mobile access

Works on smartphones and desktop

### Choice

Compare events, dates, tiers and seating

### Reliability

Fewer sold-out, payment and confirmation surprises

### Business value

A digital sales channel for organizers

### Suggested scope

if live event inventory or payment integration is not feasible, demonstrate the main user flow with sample event data and a clearly labelled simulated payment step.

# Functional Requirements

| | |
|---|---|
| FR-01 | Browse and search events |
| FR-02 | Filter by category, date, venue, price |
| FR-03 | Show details, tickets, fees, availability |
| FR-04 | Select ticket quantity or seats |
| FR-05 | Show order total before payment |
| FR-06 | Collect booking info and start payment |
| FR-07 | Show success, failure or pending |
| FR-08 | Generate booking reference and tickets |
| FR-09 | Let users review booking details |
| FR-10 | Explain errors with recovery steps |

# Nonfunctional Requirements

## Usability

Easy for first-time users to reach checkout

## Accessibility

Keyboard navigation, readable contrast, clear labels and errors

## Performance

Common pages load within 3 seconds

## Compatibility

Works on major desktop and mobile browsers

## Availability

99.5% monthly availability target

## Reliability

Prevent duplicate bookings, show clear status

## Security

HTTPS, protected data, no raw card storage

## Privacy

Collect only needed data and explain its use

# Product Issues and Risks

**Inventory mismatch**

Re-check availability before confirming

**Fraud and privacy**

Collect less data; use a trusted provider

**Payment uncertainty**

Show status; avoid duplicate charges

**Accessibility gaps**

Fix contrast, labels, small touch targets

**Hidden fees**

Show fees and final total before payment

**Refunds and support**

Show policy and a clear support route

# Seven Product Dimensions

**1. Users**

Re-check availability before confirming

**2. Interfaces**

Responsive web, event pages, checkout, history

**3. Actions**

Search, filter, compare, pay, retrieve

**4. Data**

Events, venues, prices, inventory, bookings

**5. Environment**

Mobile and desktop, weak networks, demand spikes

**6. Quality**

Usability, accessibility, speed, security

**7. Constraints**

Time, budget, skills, integrations, data

# Atomic User Stories

*As a [user], I want [goal], so that [benefit]. US-01 to 05: visitor. US-06 to 14: buyer.*

- **US-01** Search events by keyword
- **US-02** Filter by date and category
- **US-03** View event details
- **US-04** Compare ticket types and prices
- **US-05** See current availiability
- **US-06** Select ticket quantity or seats
- **US-07** See fees and final total first
- **US-08** Enter required booking details
- **US-09** Pay through a secure flow
- **US-10** See if payment succeeded or failed
- **US-11** Get booking reference, confirmation
- **US-12** Access digital tickets later
- **US-13** Review booking details
- **US-14** Get clear errors when booking fails

# Example Acceptance Criteria

## US-07 · Price transparency

- Order summary shows the ticket price
- Each applicable fee is shown before paying
- Final total is visible before payment is confirmed

## US-10 · Payment status

- Clear success, failure or pending status
- A useful next step if payment fails
- Warning before retry if status is uncertain

# Prioritization

## Must Have

- Event search and details
- Ticket selection
- Transparent order total
- Checkout status
- Confirmation and ticket access

## Should Have

- Filters
- Booking history
- Improved ticket retrieval
- Clear error recovery

## Could Have

- Personalized recommendations
- Saved events
- Promotional codes
- Group coordination

# Validation Plan

1

Interview at least five users with different buying habits

2

Observe two users on existing ticket products

3

Test a prototype with both personas

4

Record task completion, errors, comments, confidence

5

Revise requirements and confirm priorities

# Conclusion

**TechTix helps users move from event discovery to ticket access.**

**Priorities:** transparent pricing, clear event information, secure checkout, reliable booking status and accessible tickets.
Next: refine requirements with real user evidence.

# Thank you!
